

TOP 10

reasons why businesses choose contentCrawler to find every document

- | | | | | |
|--|--|---|--|--|
| 1
Smart monitoring
It finds image-based documents, assesses, and automatically converts them to searchable PDFs – no matter how they entered your systems. | 2
Automation
The 24/7 service operates unseen in the backend. Administrators can just set and forget while staff continue to add and profile documents as usual. | 3
New and legacy files
It processes legacy documents that came in through scanning, mergers and acquisitions and any new files created. It can work in both modes simultaneously. | 4
Better search
Ensures staff can find every file, every time, because failing to find documents leads to poor decision-making and reduces productivity. | 5
Compliance
It ensures all documents are available on-demand, so you can comply with full disclosure in eDiscovery and Data Subject Access Requests under the GDPR. |
| 6
Compression
The Compression module reduces file size, saving on storage costs without affecting the quality of the document. | 7
Foundation for AI
It builds a foundation of searchable data to prepare your business for AI and enterprise search technology. | 8
Reporting
The Administration Console's dashboard provides up to the minute progress, showing the number and percentage of documents OCRd and Compressed. | 9
Languages
Includes multi-language recognition of over 180 languages. Select up to 16 languages for OCR recognition with no effect on processing speed. | 10
On-premises or cloud
OCR and image compression can be delivered on-premises or installed on a hosted VM such as Microsoft Azure VM. |
